

A Complete Monitoring Solution for all Gas and Air Compressors.

The Hosted Sitewatch™ Telemetry Service

Cloud based monitoring solution requiring no software install. Animated graphics mimic equipment status on secure, password protected web page(s) created for you. View status, historical data and event/alarm history using any device with Internet access. A small annual subscription means you have no capital outlay and ongoing maintenance of your own servers and IT infrastructure.

- Integrate on new or retro-fit to existing compressor skids.
- View live status of your compressor and other site assets.
- Monitor electrical health and hours run.
- Trend and export historical data.
- Receive Email & SMS alerts.
- Lee-Dickens can supply, install and commission your system.

Remote Terminal Unit (RTU)

Our discrete, IP rated RTU is used to remotely communicate events and alarms off-site. The RTU provides physical and serial interfaces and is battery supported for long term operation.

Compressor

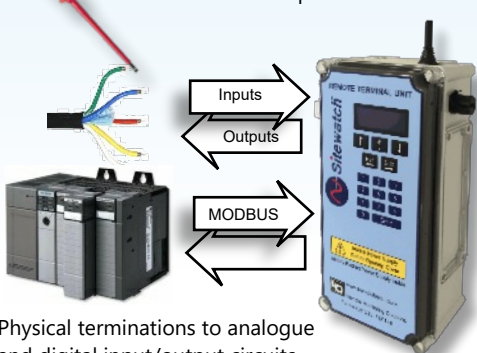

Communication

Application

Your own secure, password protected Web pages. Graphical status and history displayed.

Remote Terminal Unit transmits your data Off-Site. RTU can read multiple sensors.

Physical terminations to analogue and digital input/output circuits. Serial connection to other Intelligent devices such as a PLC.

RTU supports:

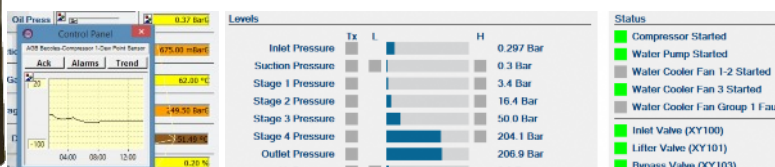

- GPRS
- GSM
- PSTN
- Radio
- Ethernet communications

Text and Email alerts 24/7, 365.

Sitewatch™ has a simple, intuitive user interface.

Certificate No. FM29298
